No manual Posting of Transaction

When Account Admin post the journal, a transaction will be created automatically (along with transaction line item if there is line item child object from journal).

Please find the code associate with POST button at PostButtonJavaScript.js.

No transaction or transaction line item will be created manually. In case, user is trying to create new transaction by clicking "New transaction", for security reason , he will be redirected to a default visualforce page.

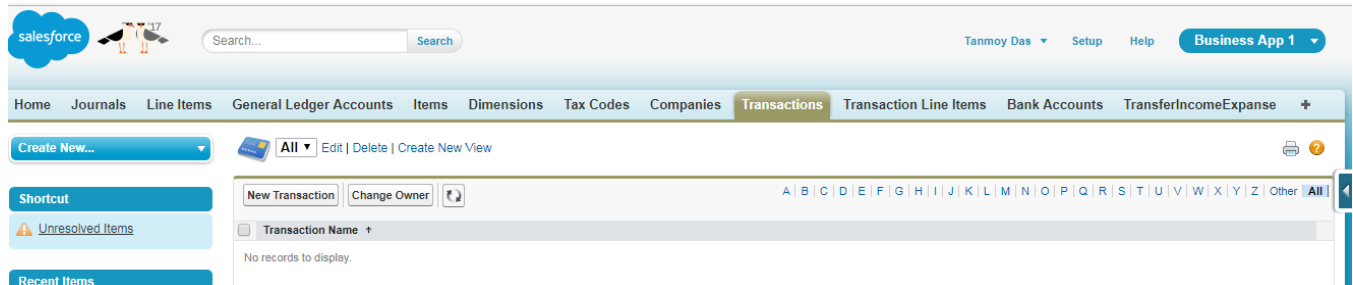

Figure 1: Trying to enter Transaction information manually

Figure 2: Default Transaction page the user will be redirected if New Transaction is clicked (or user is trying to create transactions manually)

All Transaction Data are coming from Journal. Therefore, **no user input** is necessary for Transaction table.

Figure 3: When user is trying to manually enter Transaction, he/she will be redirected to this page
